SUMMARY

Software Engineer with **5 years** of experience spanning full-stack development and technical support. Specializes in **production troubleshooting**, **database optimization**, and mission-critical system maintenance — cutting incident resolution from **hours to minutes** through hands-on root cause analysis on live systems. Operates across **finance and pawnshop industries** with deep ownership of multiple concurrent production systems. Known for **strong accountability and punctuality**, able to work both independently and as part of a team. Approachable, adaptable, and committed to **continuous self-improvement**.

WORK_EXPERIENCE

Software Engineer
2023 – Aug 2026

Tungthanasin Group (Easy Money)

- Architected and maintained `Check Stock` — automated `24/7` random stock verification across nationwide branches, eliminating manual processes
- Built `Project M` for foreclosed asset & auction management — replaced manual Oracle data entry with direct ERP integration, clearing long-standing backlog jobs
- Resolved critical `In-Process` system failures — traced root causes across Cron Jobs, status logic, and stuck transactions, then recovered every affected record
- Developed `ERP Connect` for bidirectional automated Oracle ERP data sync — shipped changes to a system in active use with zero downtime
- Managed `5+ concurrent systems` while supporting RPA automation and Gemini website integration

Backend Developer / IT Programmer
2021 – 2023

AdaSoft

- Developed `POS System` with Codeigniter Framework for clients including PTT FitAuto and KingpowerClick
- Built product-presentation websites — `Orafon`, `Skzicthailand`, `Kmcgasia.com` — covering full frontend and backend
- Managed database architecture and performance optimization for client projects
- Delivered maintenance and feature enhancements across customer portfolio

IT Programmer
Mar 2020 – May 2021

Oranoss Co., Ltd.

- Designed website frontend, backend, and database architecture for client projects
- Developed frontend and backend systems end-to-end
- Maintained, debugged, and improved websites on an ongoing basis

Backend Developer (Internship)
Nov 2019 – Feb 2020

JobBKK.com

- Supported, debugged, and improved website features on a case-by-case basis

KEY_PROJECTS

Pundit — AI vs Human Prediction League

Personal Project

Football prediction league where AI agents compete against people under identical rules and deadlines. Built end-to-end on Next.js 16 App Router, with every fairness guarantee enforced at the database layer rather than hidden in the UI.

`Next.js 16` `React` `TypeScript` `PostgreSQL` `Drizzle ORM` `Auth.js` `Tailwind CSS` `Vercel AI SDK` `Gemini`

// outcome Deadline checked against Postgres `now()` in the same statement as the write; idempotent scoring keyed on `result_version`; `FORCE ROW LEVEL SECURITY` hides picks until lock; football API cached with stale-data fallback to stay in the free tier.

PDF Tools — Browser-Only PDF Toolkit

Live · pdf.devda.fyi

12 PDF tools (merge, split, compress, protect, PDF→Word, …) that run entirely in the browser — files never leave the user's device, so there is no server cost and nothing to leak.

`Next.js 16` `TypeScript` `WebAssembly` `Pyodide` `mupdf.js` `Web Workers` `Playwright` `GitHub Actions`

// outcome Thai PDF→Word conversion scores `99.0` visual fidelity against the original, using pdf2docx on Pyodide plus `Intl.Segmenter` word breaks so Word wraps Thai lines exactly like the PDF.

Community Equipment Lending System

Live · in daily use

Multi-tenant lending system for community groups: staff roles, inventory, printable A4 loan documents, and QR self-service borrowing with no login, built for low-tech users on mobile.

`Next.js 16` `TypeScript` `PostgreSQL (Neon)` `Drizzle ORM` `Tesseract.js` `ONNX Runtime Web` `LINE Messaging API` `Playwright`

// outcome Thai ID cards are read **on-device** (Tesseract + PaddleOCR) so the image never leaves the phone; ID images and signatures are deleted automatically once every item is returned (PDPA).

Check Stock System

Nationwide automated stock verification replacing manual branch audits — lead developer & real-time incident responder.

`PHP` `JavaScript` `Vue.js` `Nuxt.js` `Vuetify` `MySQL` `Cron Jobs` `Cloudflare`

// outcome Eliminated manual verification; enabled 24/7 automated random checks with immediate production troubleshooting.

Project M — Foreclosed Asset Management

End-to-end auction & foreclosed asset management system with direct Oracle ERP integration.

`PHP` `JavaScript` `Vue.js` `Nuxt.js` `Vuetify` `Oracle ERP` `SQL Server` `API Integration`

// outcome Replaced manual data entry with automated Oracle data pulls; cleared accumulated backlog jobs.

ERP Connect

Internal-ERP bridge handling bidirectional automated data synchronization under live production conditions.

`PHP` `Oracle ERP` `REST API` `SQL`

// outcome Automated import/export workflows; delivered fixes to a system in active use with zero downtime.

POS System — PTT FitAuto & KingpowerClick

Full-featured Point-of-Sale system for multiple enterprise clients built with Codeigniter Framework, supporting product management, orders, and sales reporting.

`PHP` `Codeigniter` `MySQL` `JavaScript` `HTML/CSS` `SQL`

// outcome Deployed POS solution for enterprise clients PTT FitAuto and KingpowerClick.

Earlier Work

2019 – 2021

- **Allreview.th** — full-stack product review platform with admin panel · PHP, CodeIgniter, MySQL
- **Smart PetFeeder** (senior project) — IoT feeder run from an Android app & web · Arduino, PHP
- **Stock & Barcode App** — Android inventory app with barcode scanning · Java, SQLite

EDUCATION

Bachelor of Science in Information Technology

2016 – 2020

Phranakhon Rajabhat University

Faculty of Science and Technology

GPA 3.10
